Putting together the processing pieces

Roadmap

- Completed projects
 - **Bottom-up processes:** Transforming acoustic signal into discrete phonological categories
 - **Top-down processes:** Revising that categorisation based on subsequent context

b a

Roadmap

Roadmap

- Completed projects

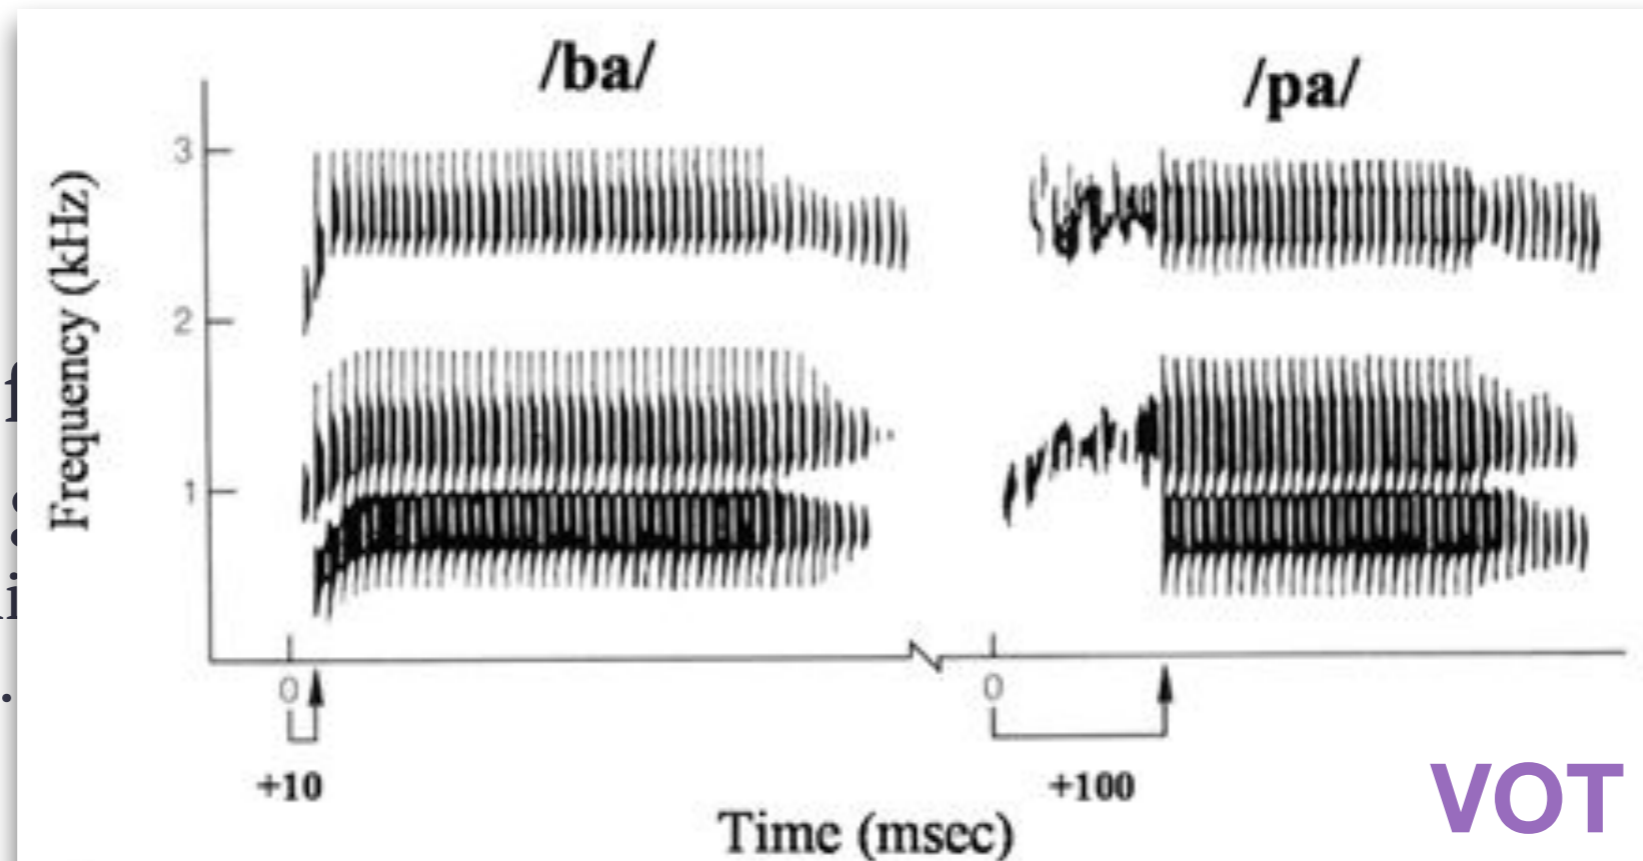

- **Bottom-up processes:** Transforming acoustic signal into discrete phonological categories
- **Top-down processes:** Revising that categorisation based on subsequent context

- Future directions

- Related processes in **continuous speech**
- **Accent** adaptation
- **Pitch perception** in music cognition

Bottom-up processing of phonemes

- Phonetic and temporal processing (Papanicolaou et al., 2003; Papanicolaou & Liberto et al., 2014; Di

- This process is related to the POA (Chang et al., 2014)

Neutralising ambiguity

At what stage of processing is phonological ambiguity alleviated?

Materials

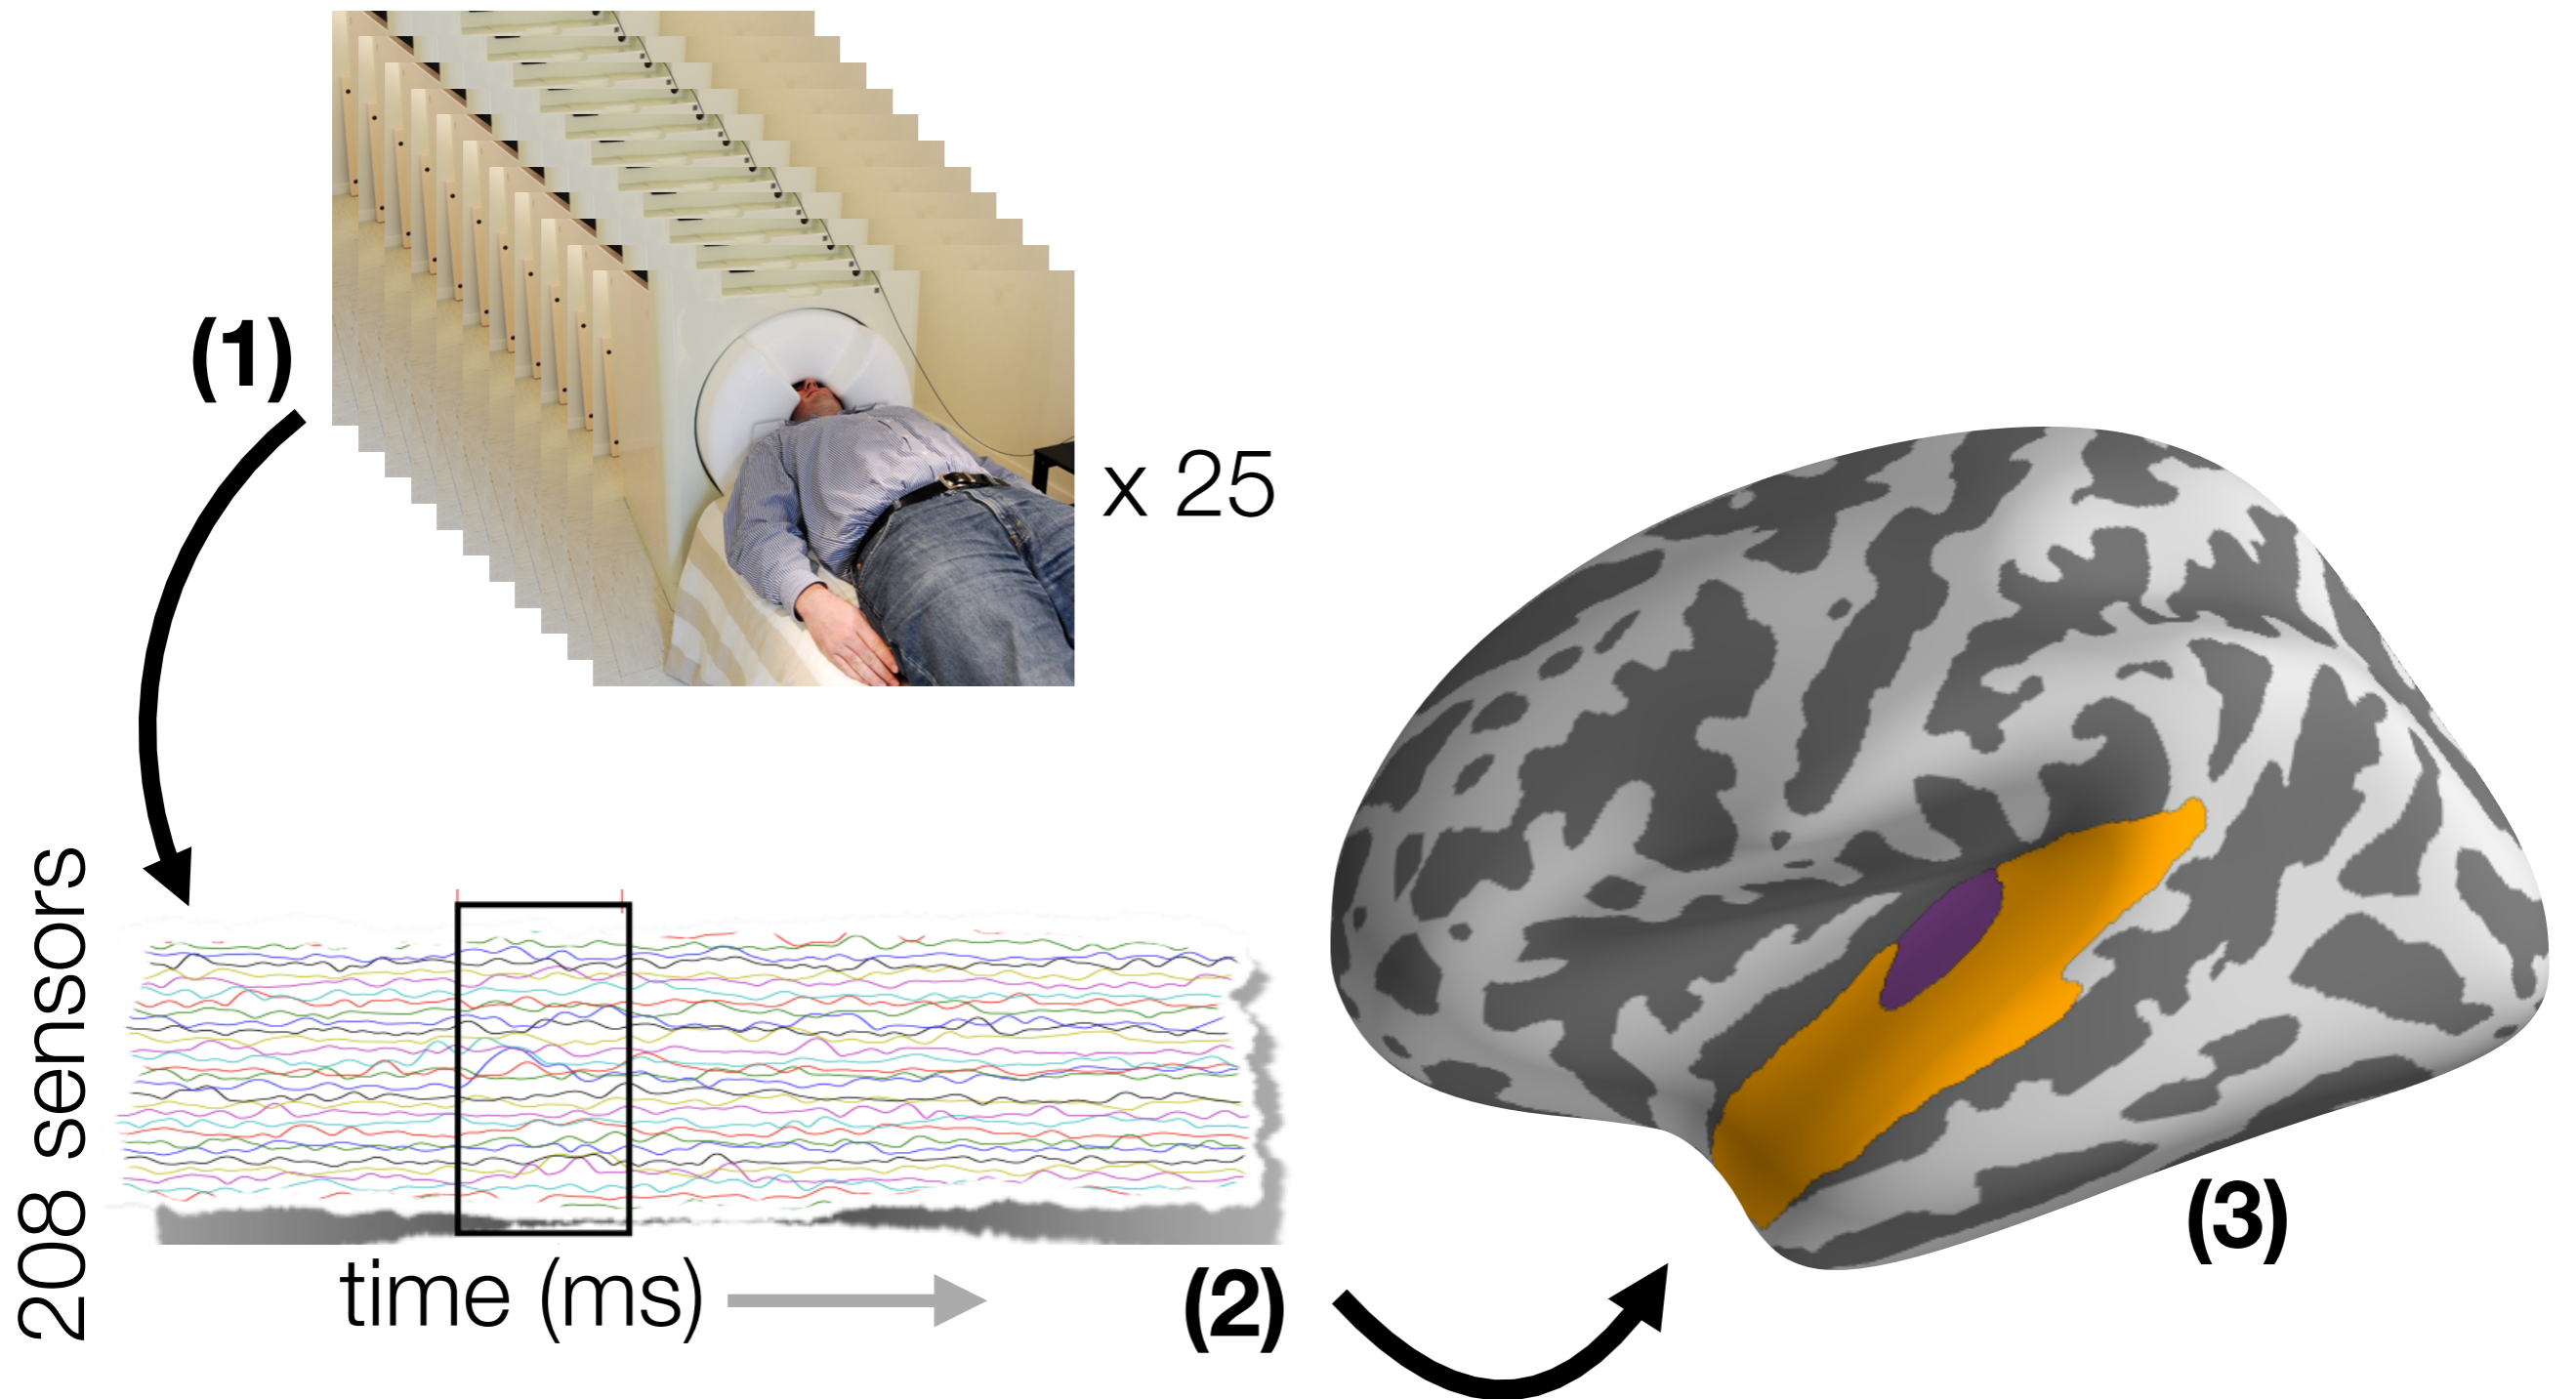

- VOT (31 pairs) {p-b, t-d, k-g} and POA (22 pairs) {t-k, p-t}

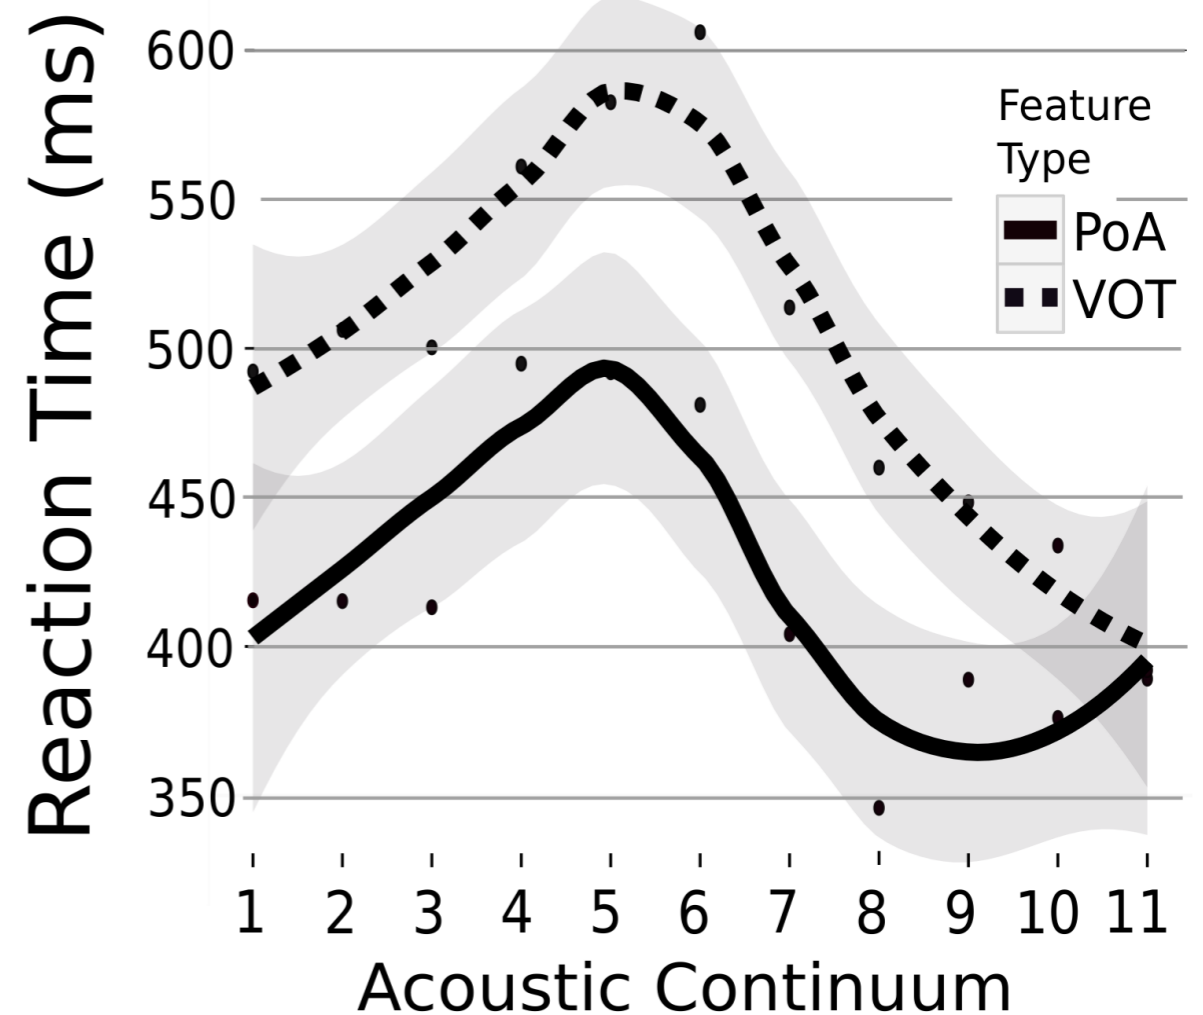

Design

Procedure & Analysis

Behaviour

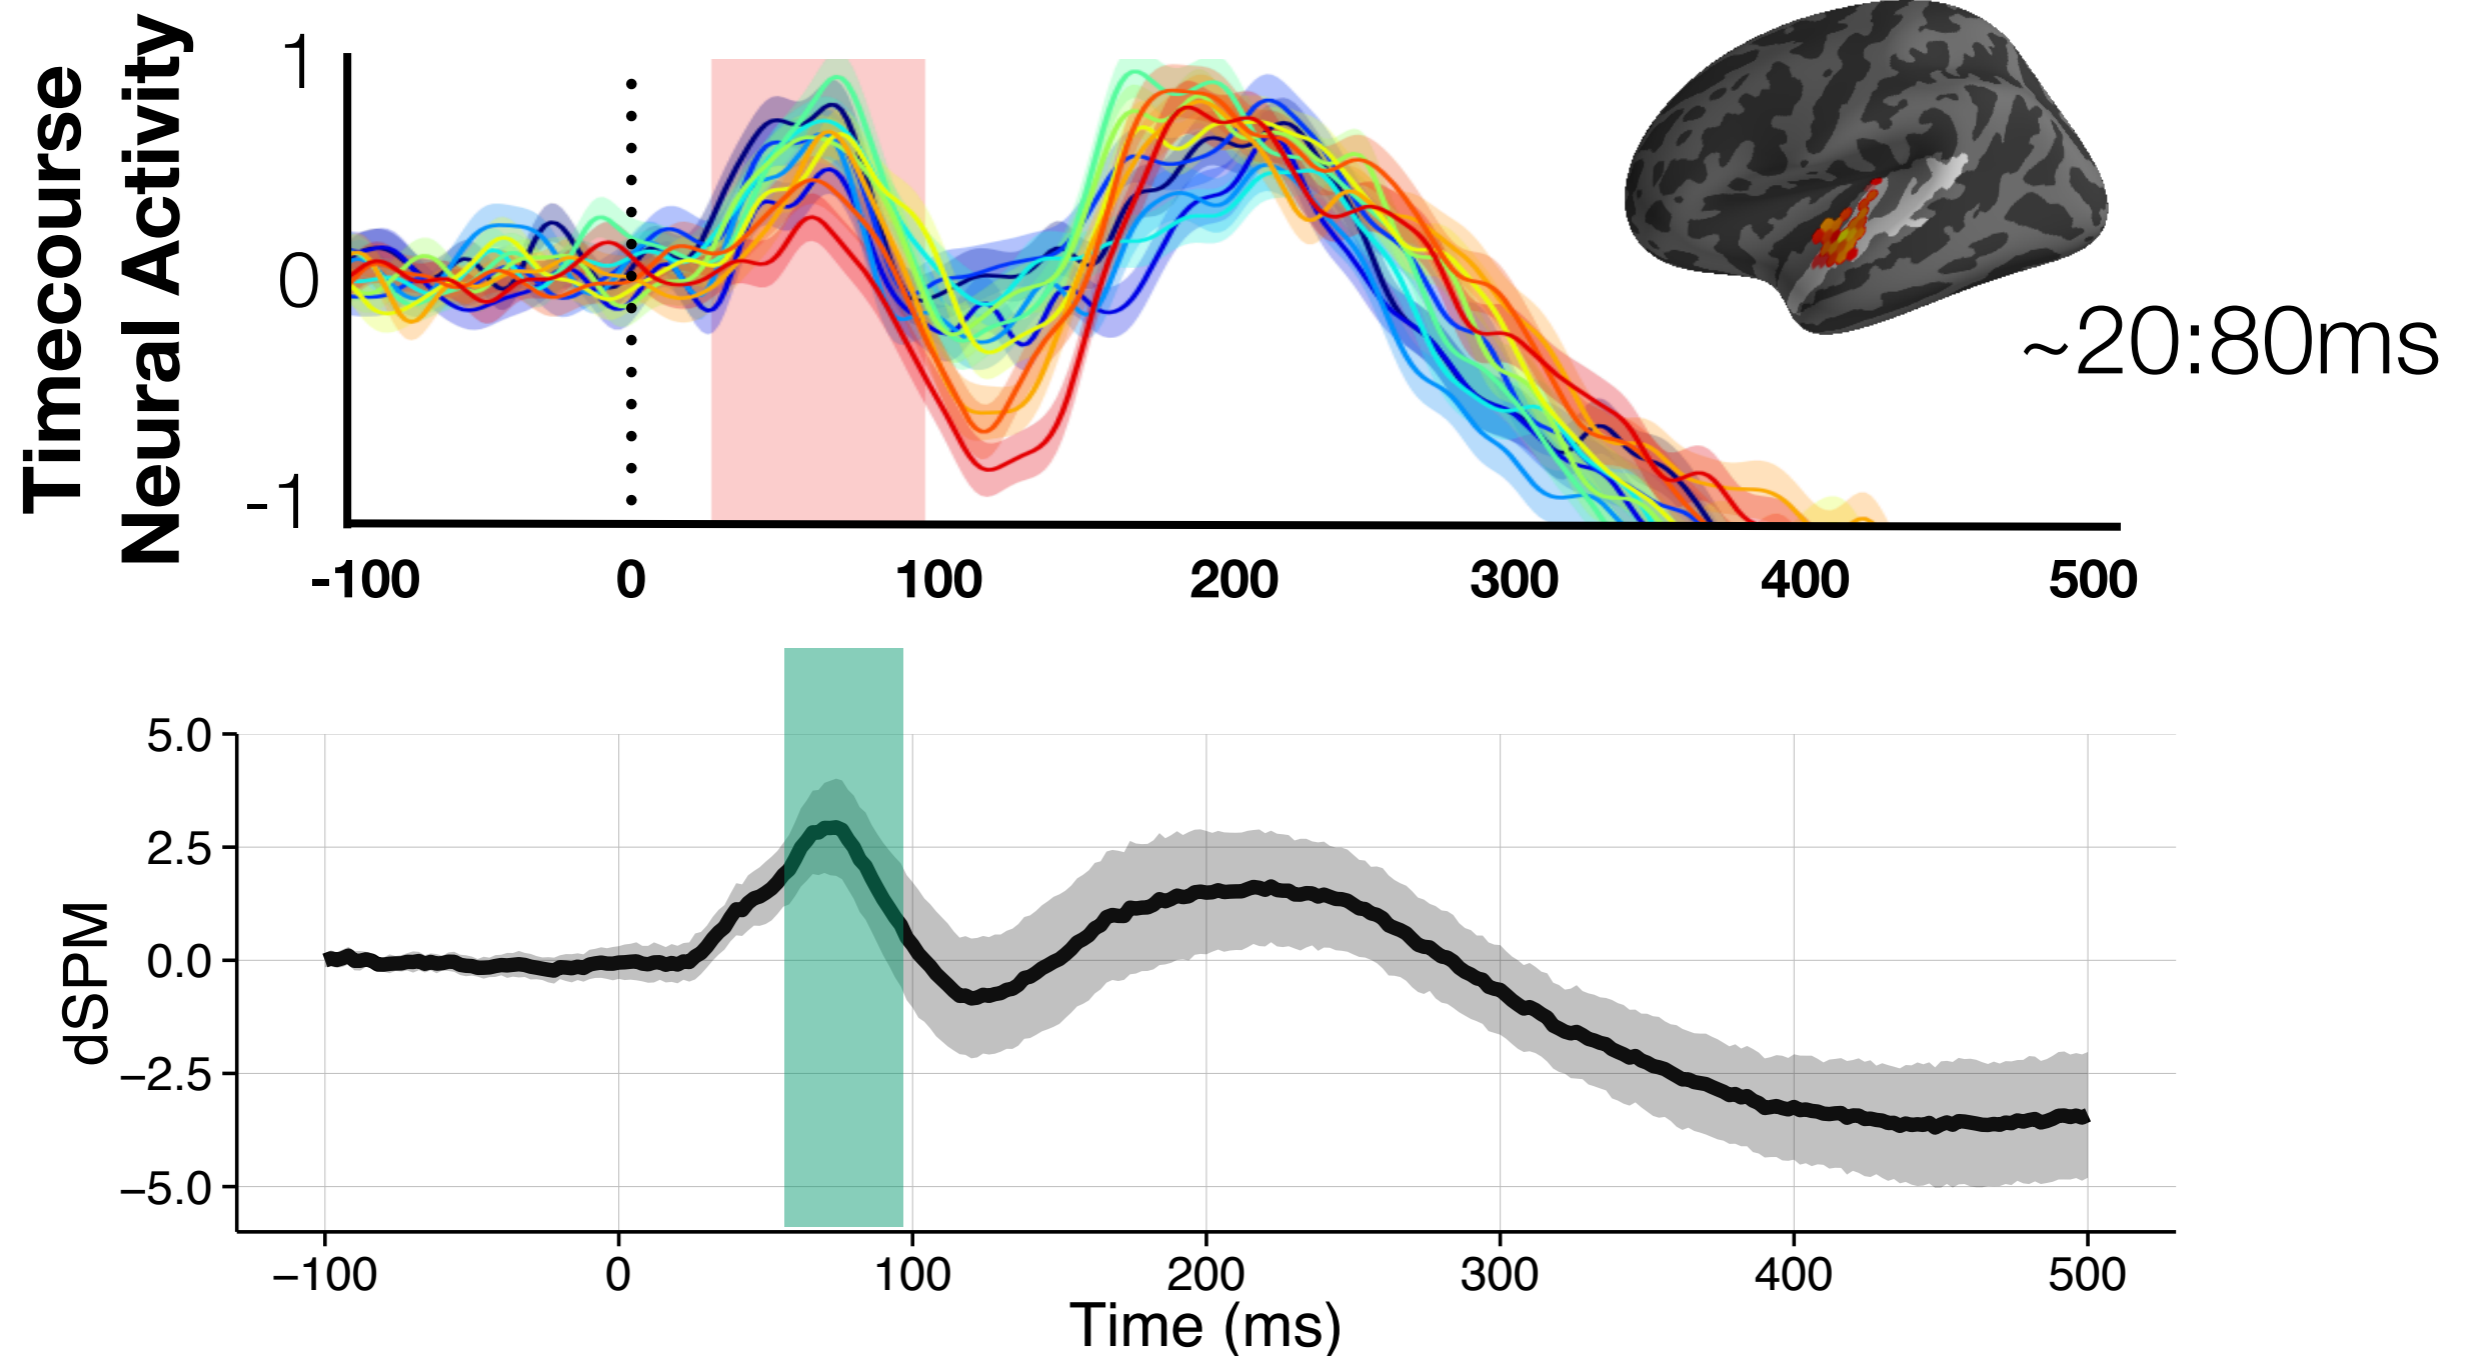

Neutralising ambiguity

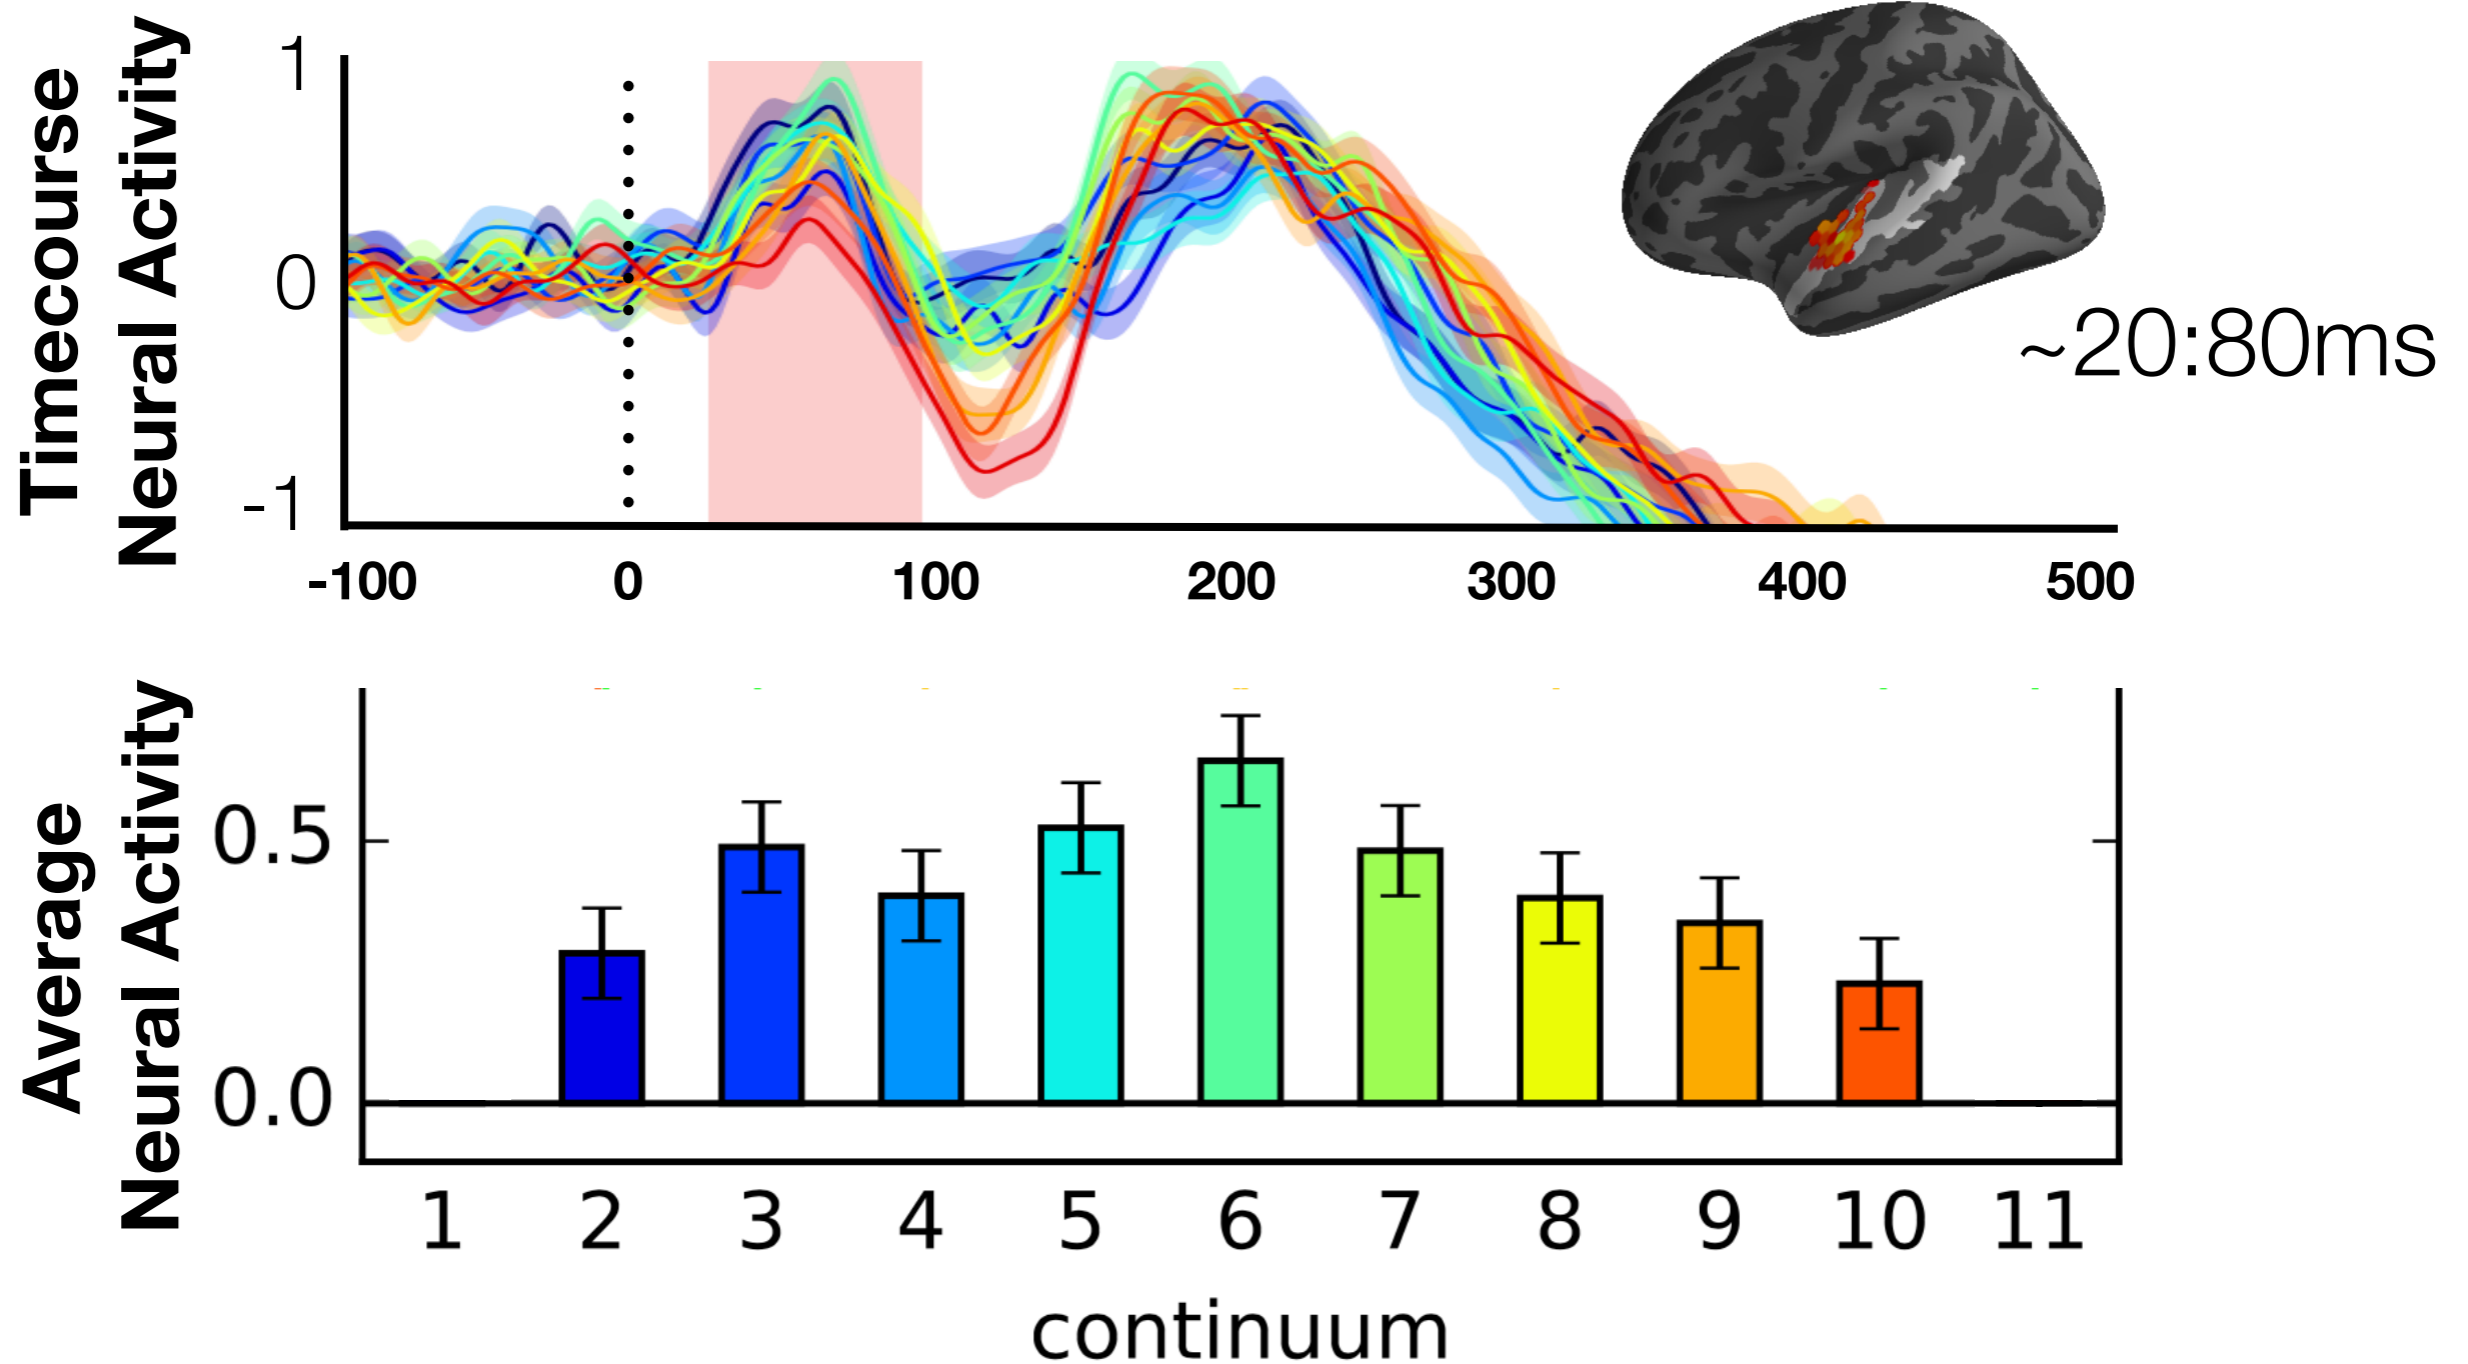

At what stage of processing is phonological ambiguity alleviated?

Early ambiguity responses in Heschl's gyrus

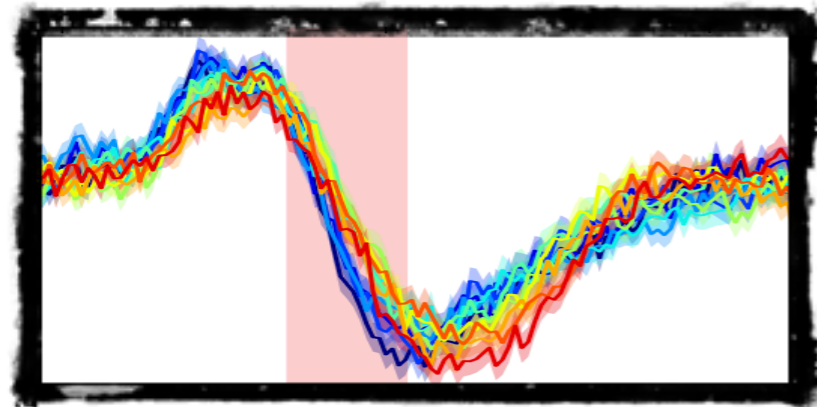

Early ambiguity responses in Heschl's gyrus

Replicating the categorical trajectory using MEG

~20:80ms
ambiguity

~80:150ms
linear

~100:200ms
categorical

Interesting links in a different domain

Gwilliams & King, *in prep*

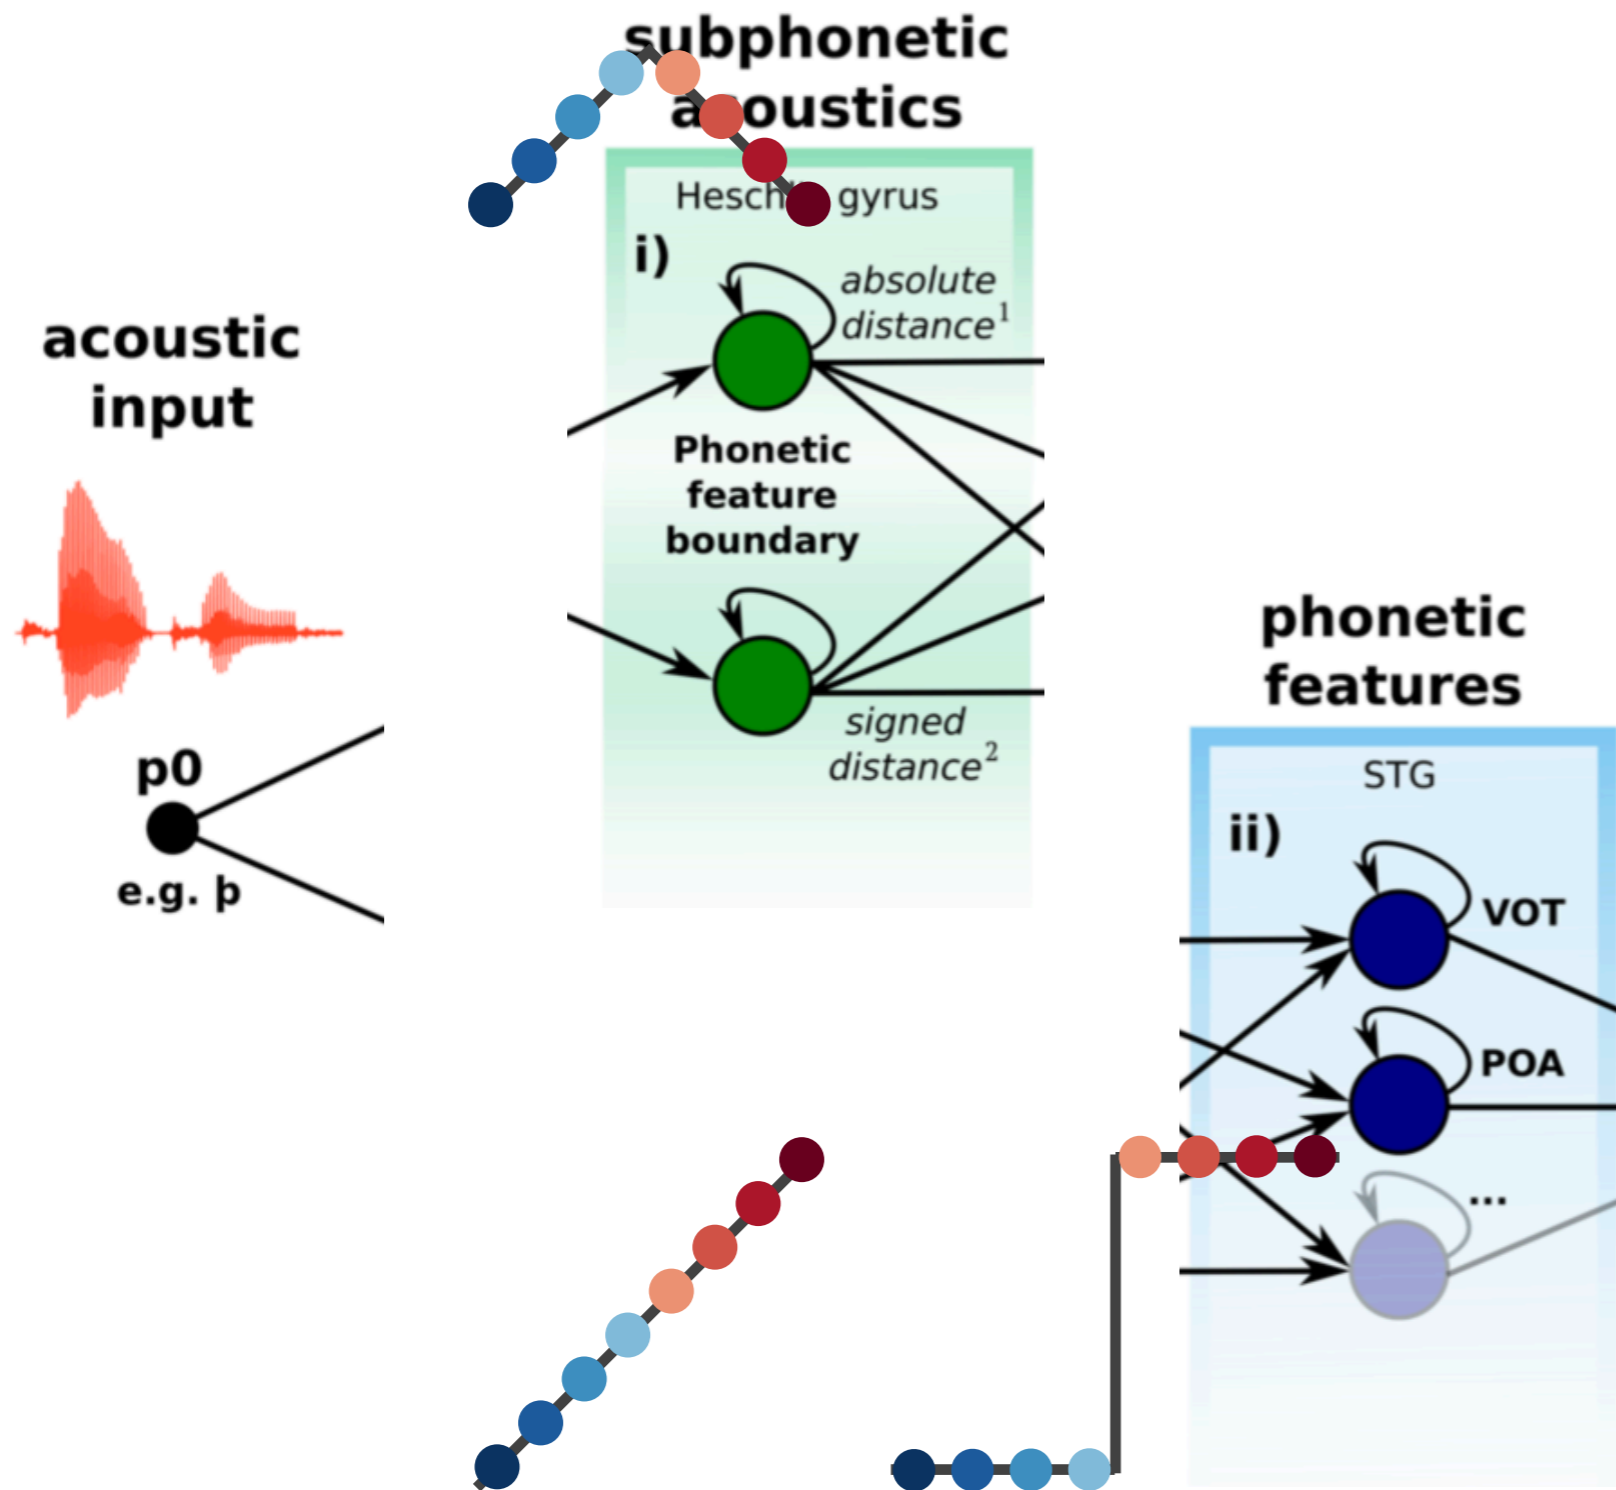

Experiment 1 Conclusions

- Responses shift from being modulated **linearly** to being modulated **categorically** (domain general?)
- Very **early sensitivity to phonological boundaries** in left Heschl's gyrus – occurs *before* categorisation (speech specific?)

Putting together the processing pieces

Top-down Influences on Perception

- Context occurring *after* an acoustic signal can be integrated to **update the perception of earlier sounds** (Bicknell et al., submitted; Connine et al., 1991; Samuel, 1981; Szostak & Pitt, 2013; Warren & Sherman, 1974)

Future Influences on Perception

Today's Questions

i could focus on the ambiguity resolution part here, rather than the original response to ambiguity. then, tie in the ambiguity response part later, linking it with AI?

How does the auditory cortex **respond** to phonological ambiguity?

What are the neural signatures of ambiguity **resolution**?

What is the **time-limit** on how late subsequent context can be received?

Design & Materials

Design & Materials

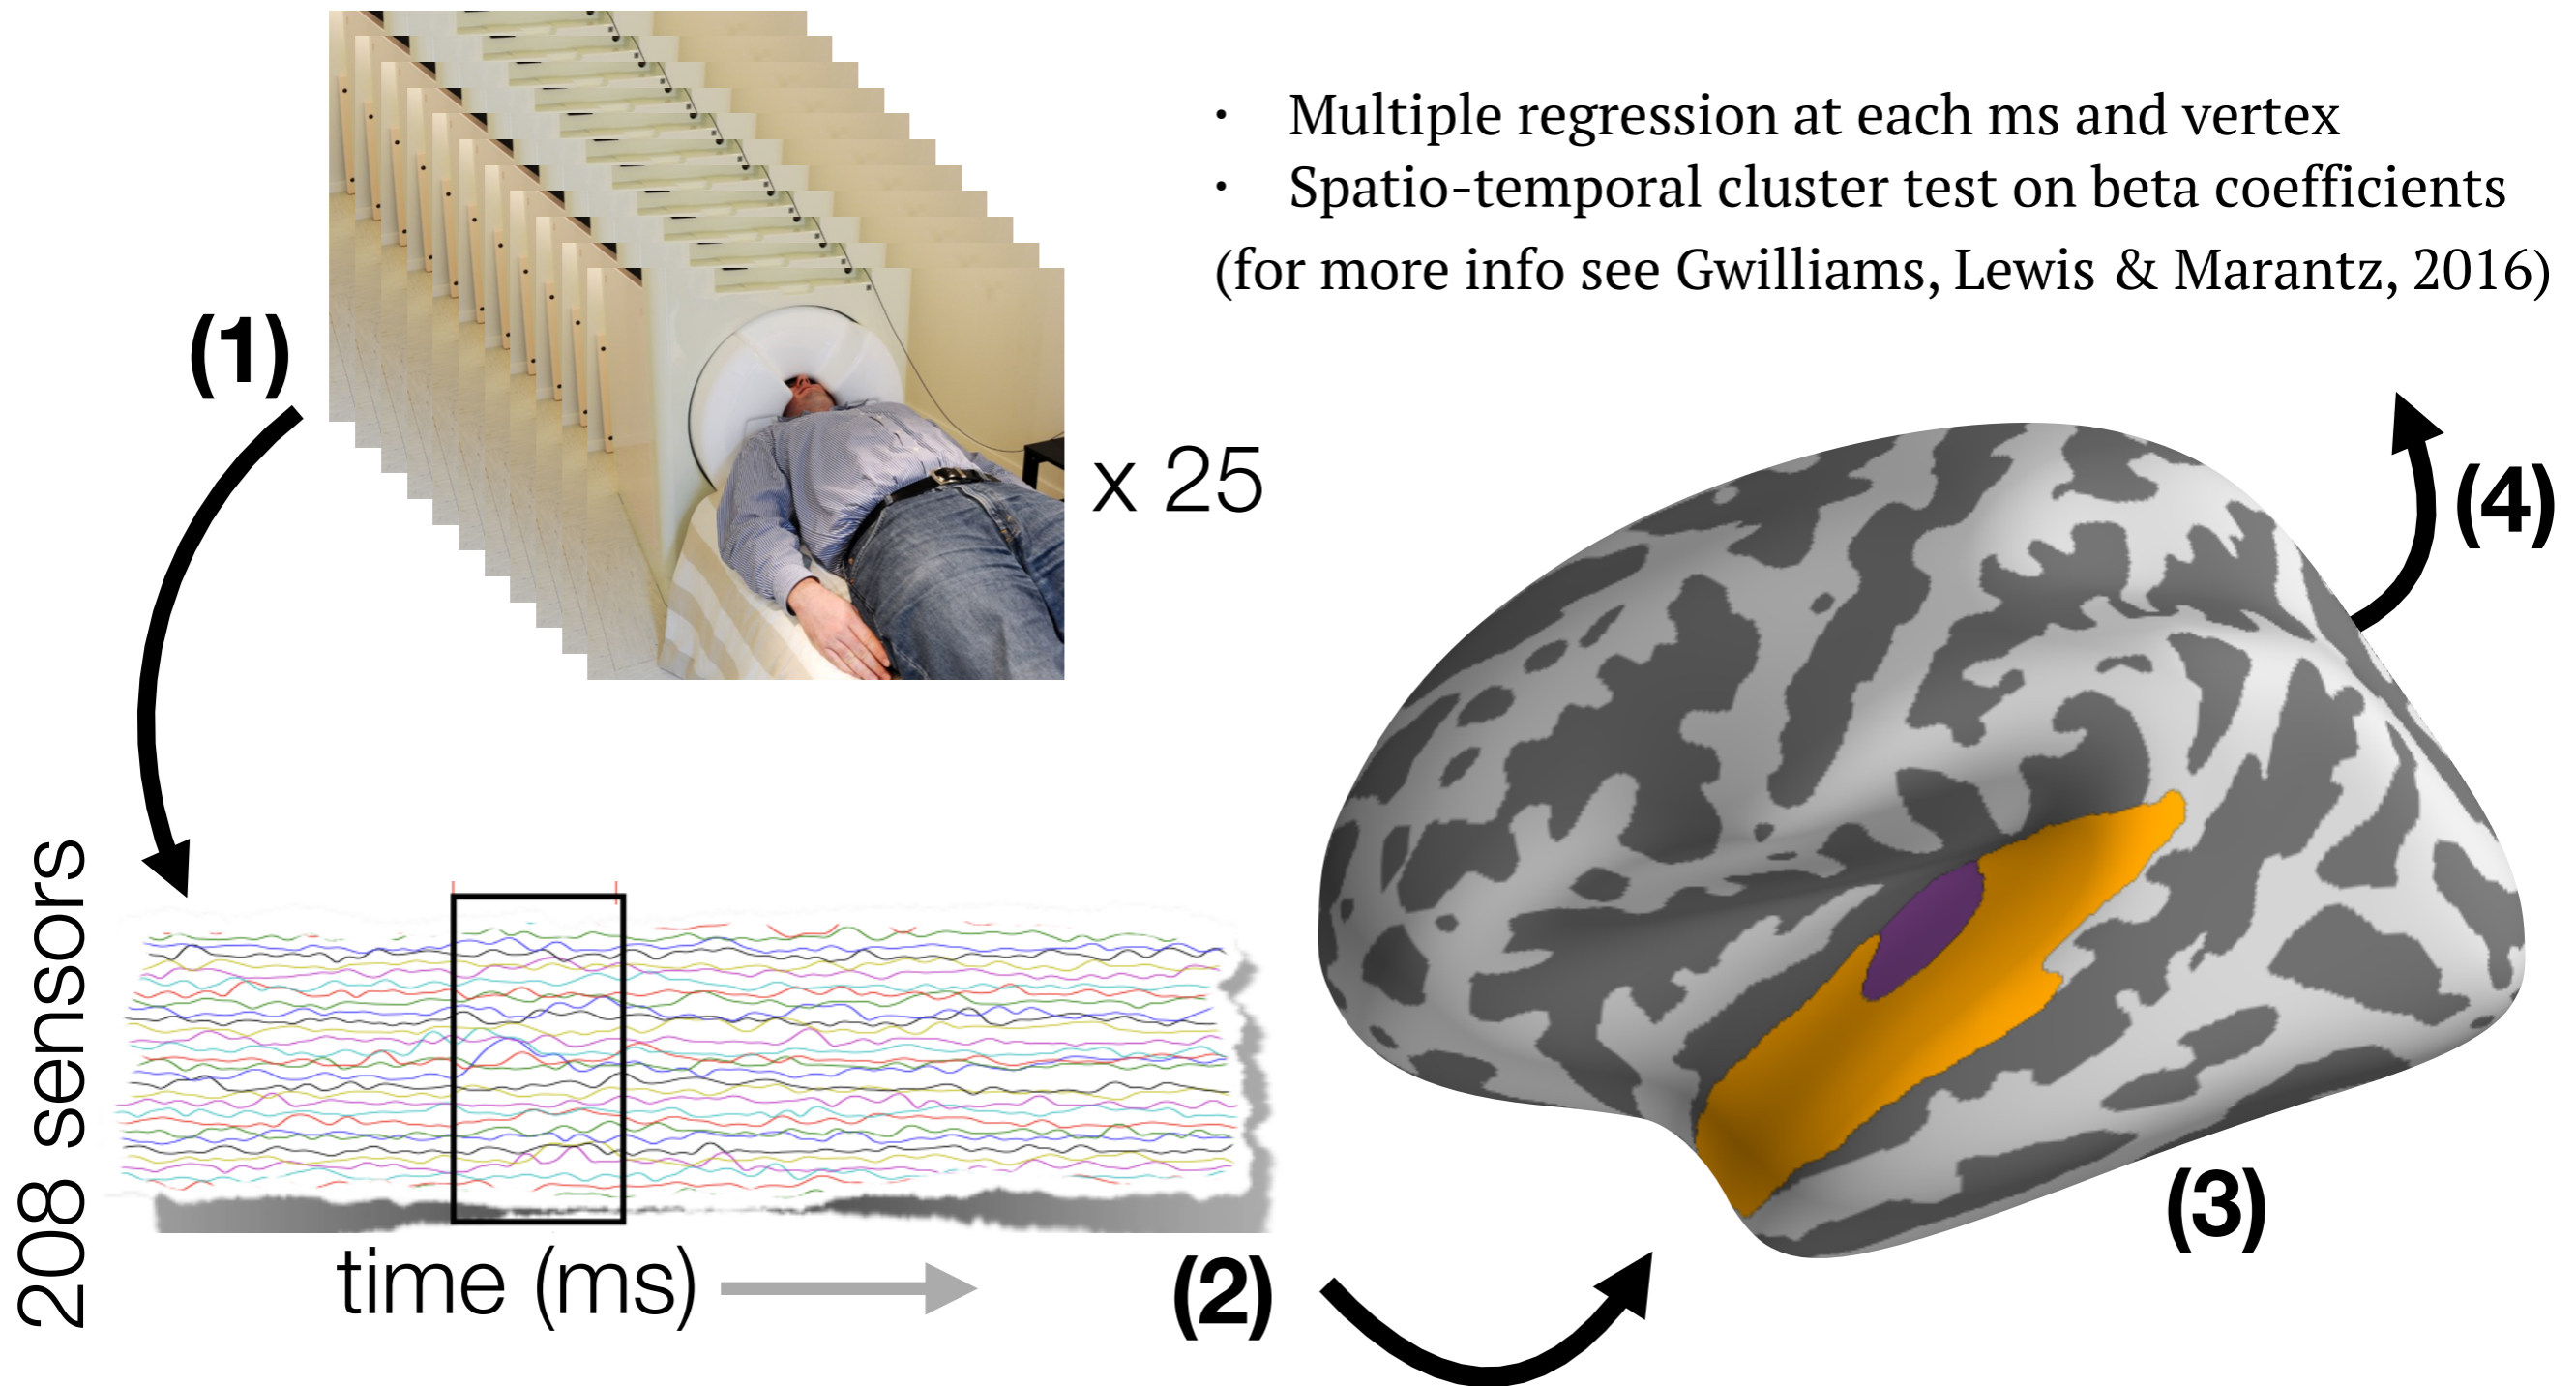

- Point of Disambiguation (POD) ranged 3-8 phonemes / 150-750 ms
- VOT (31 pairs) {p-b, t-d, k-g} and POA (22 pairs) {t-k, p-t}

Design & Materials

Interim Conclusion

Reactivation in Intermediate Positions

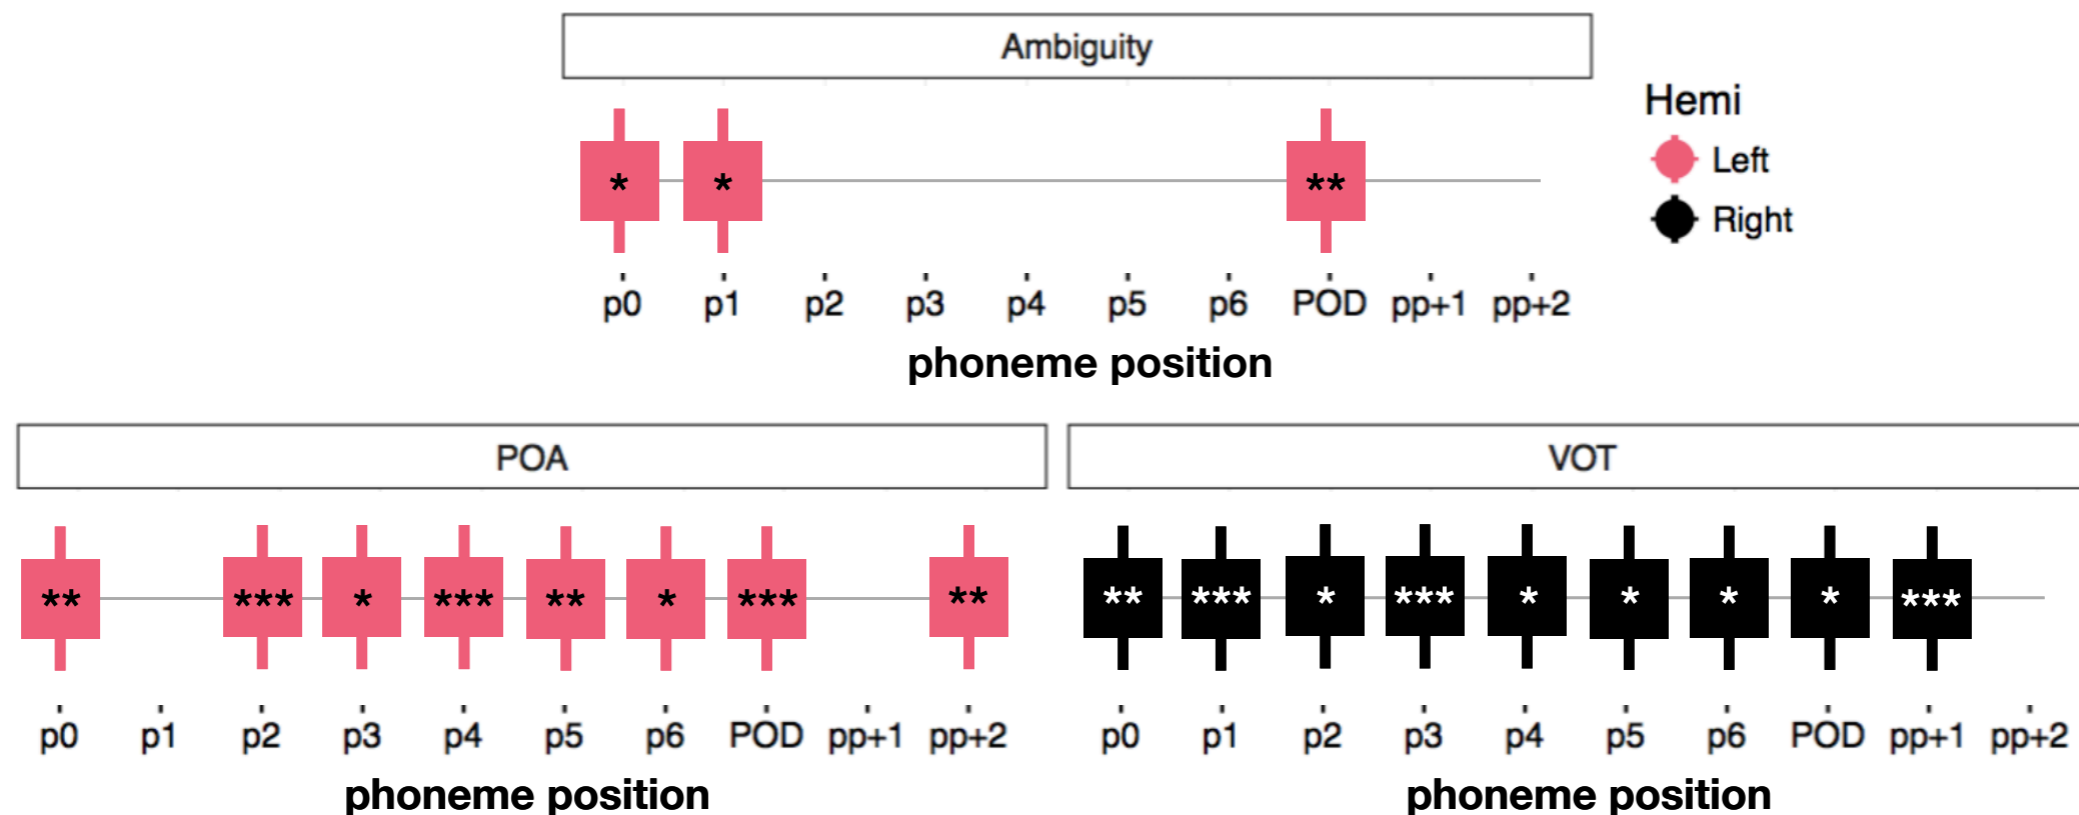

Reactivation in Intermediate Positions

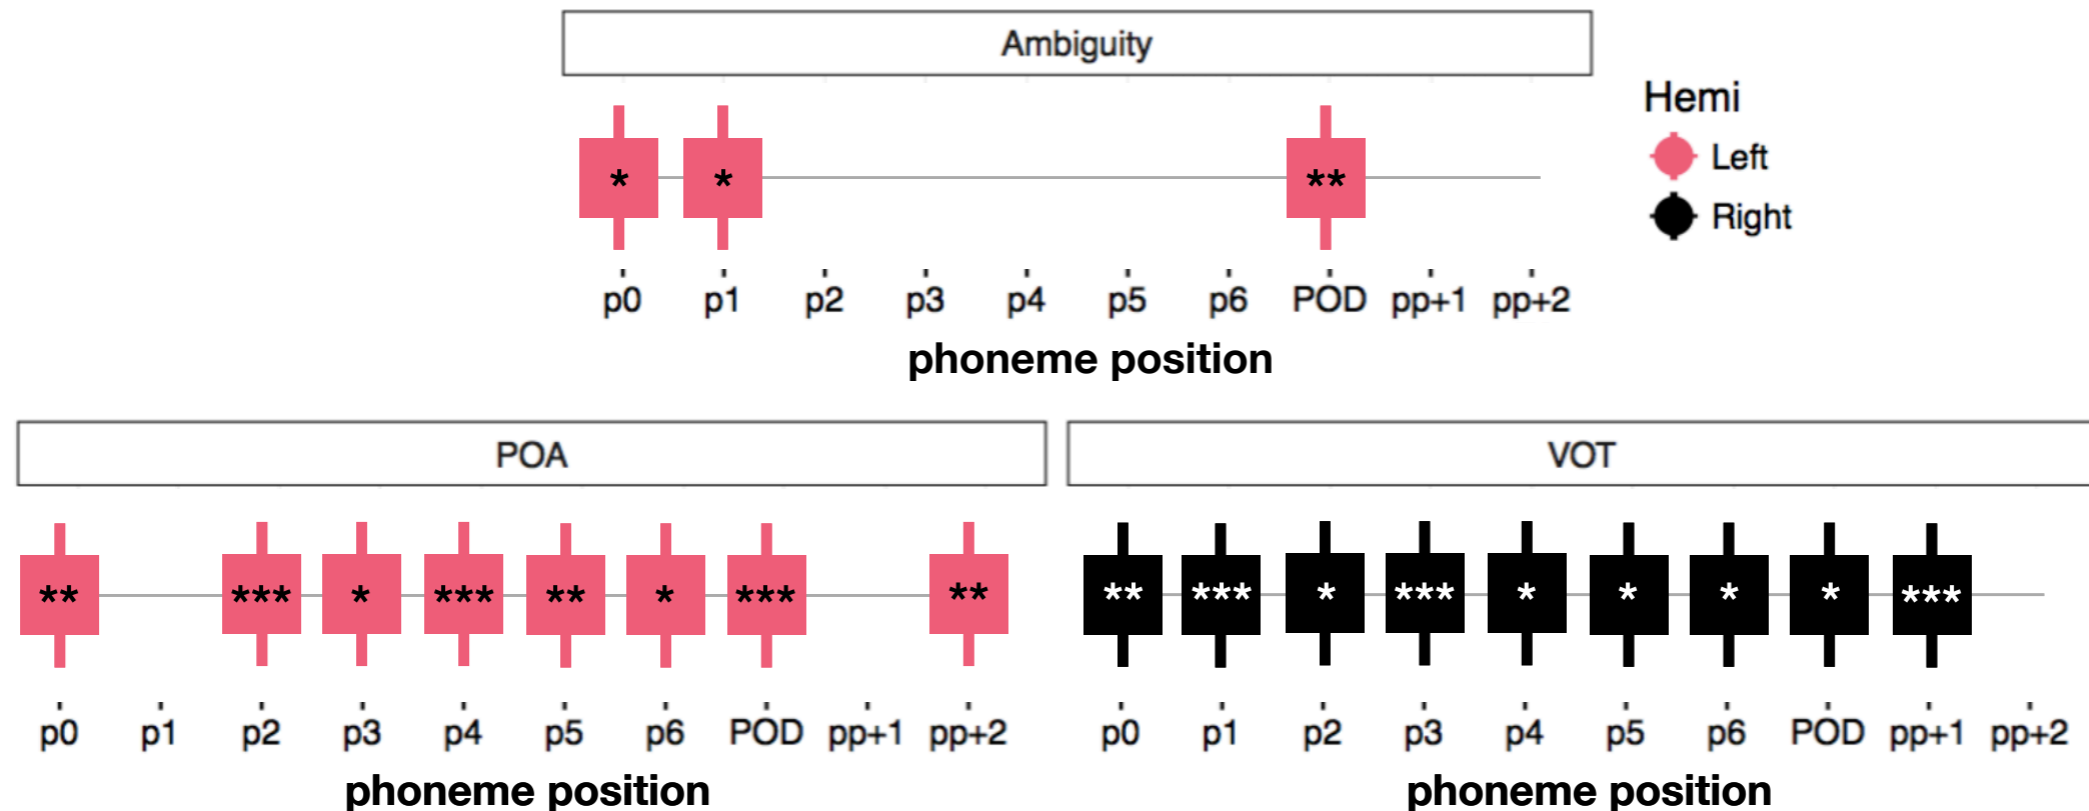

Reactivation in Intermediate Positions

Reactivation in Intermediate Positions

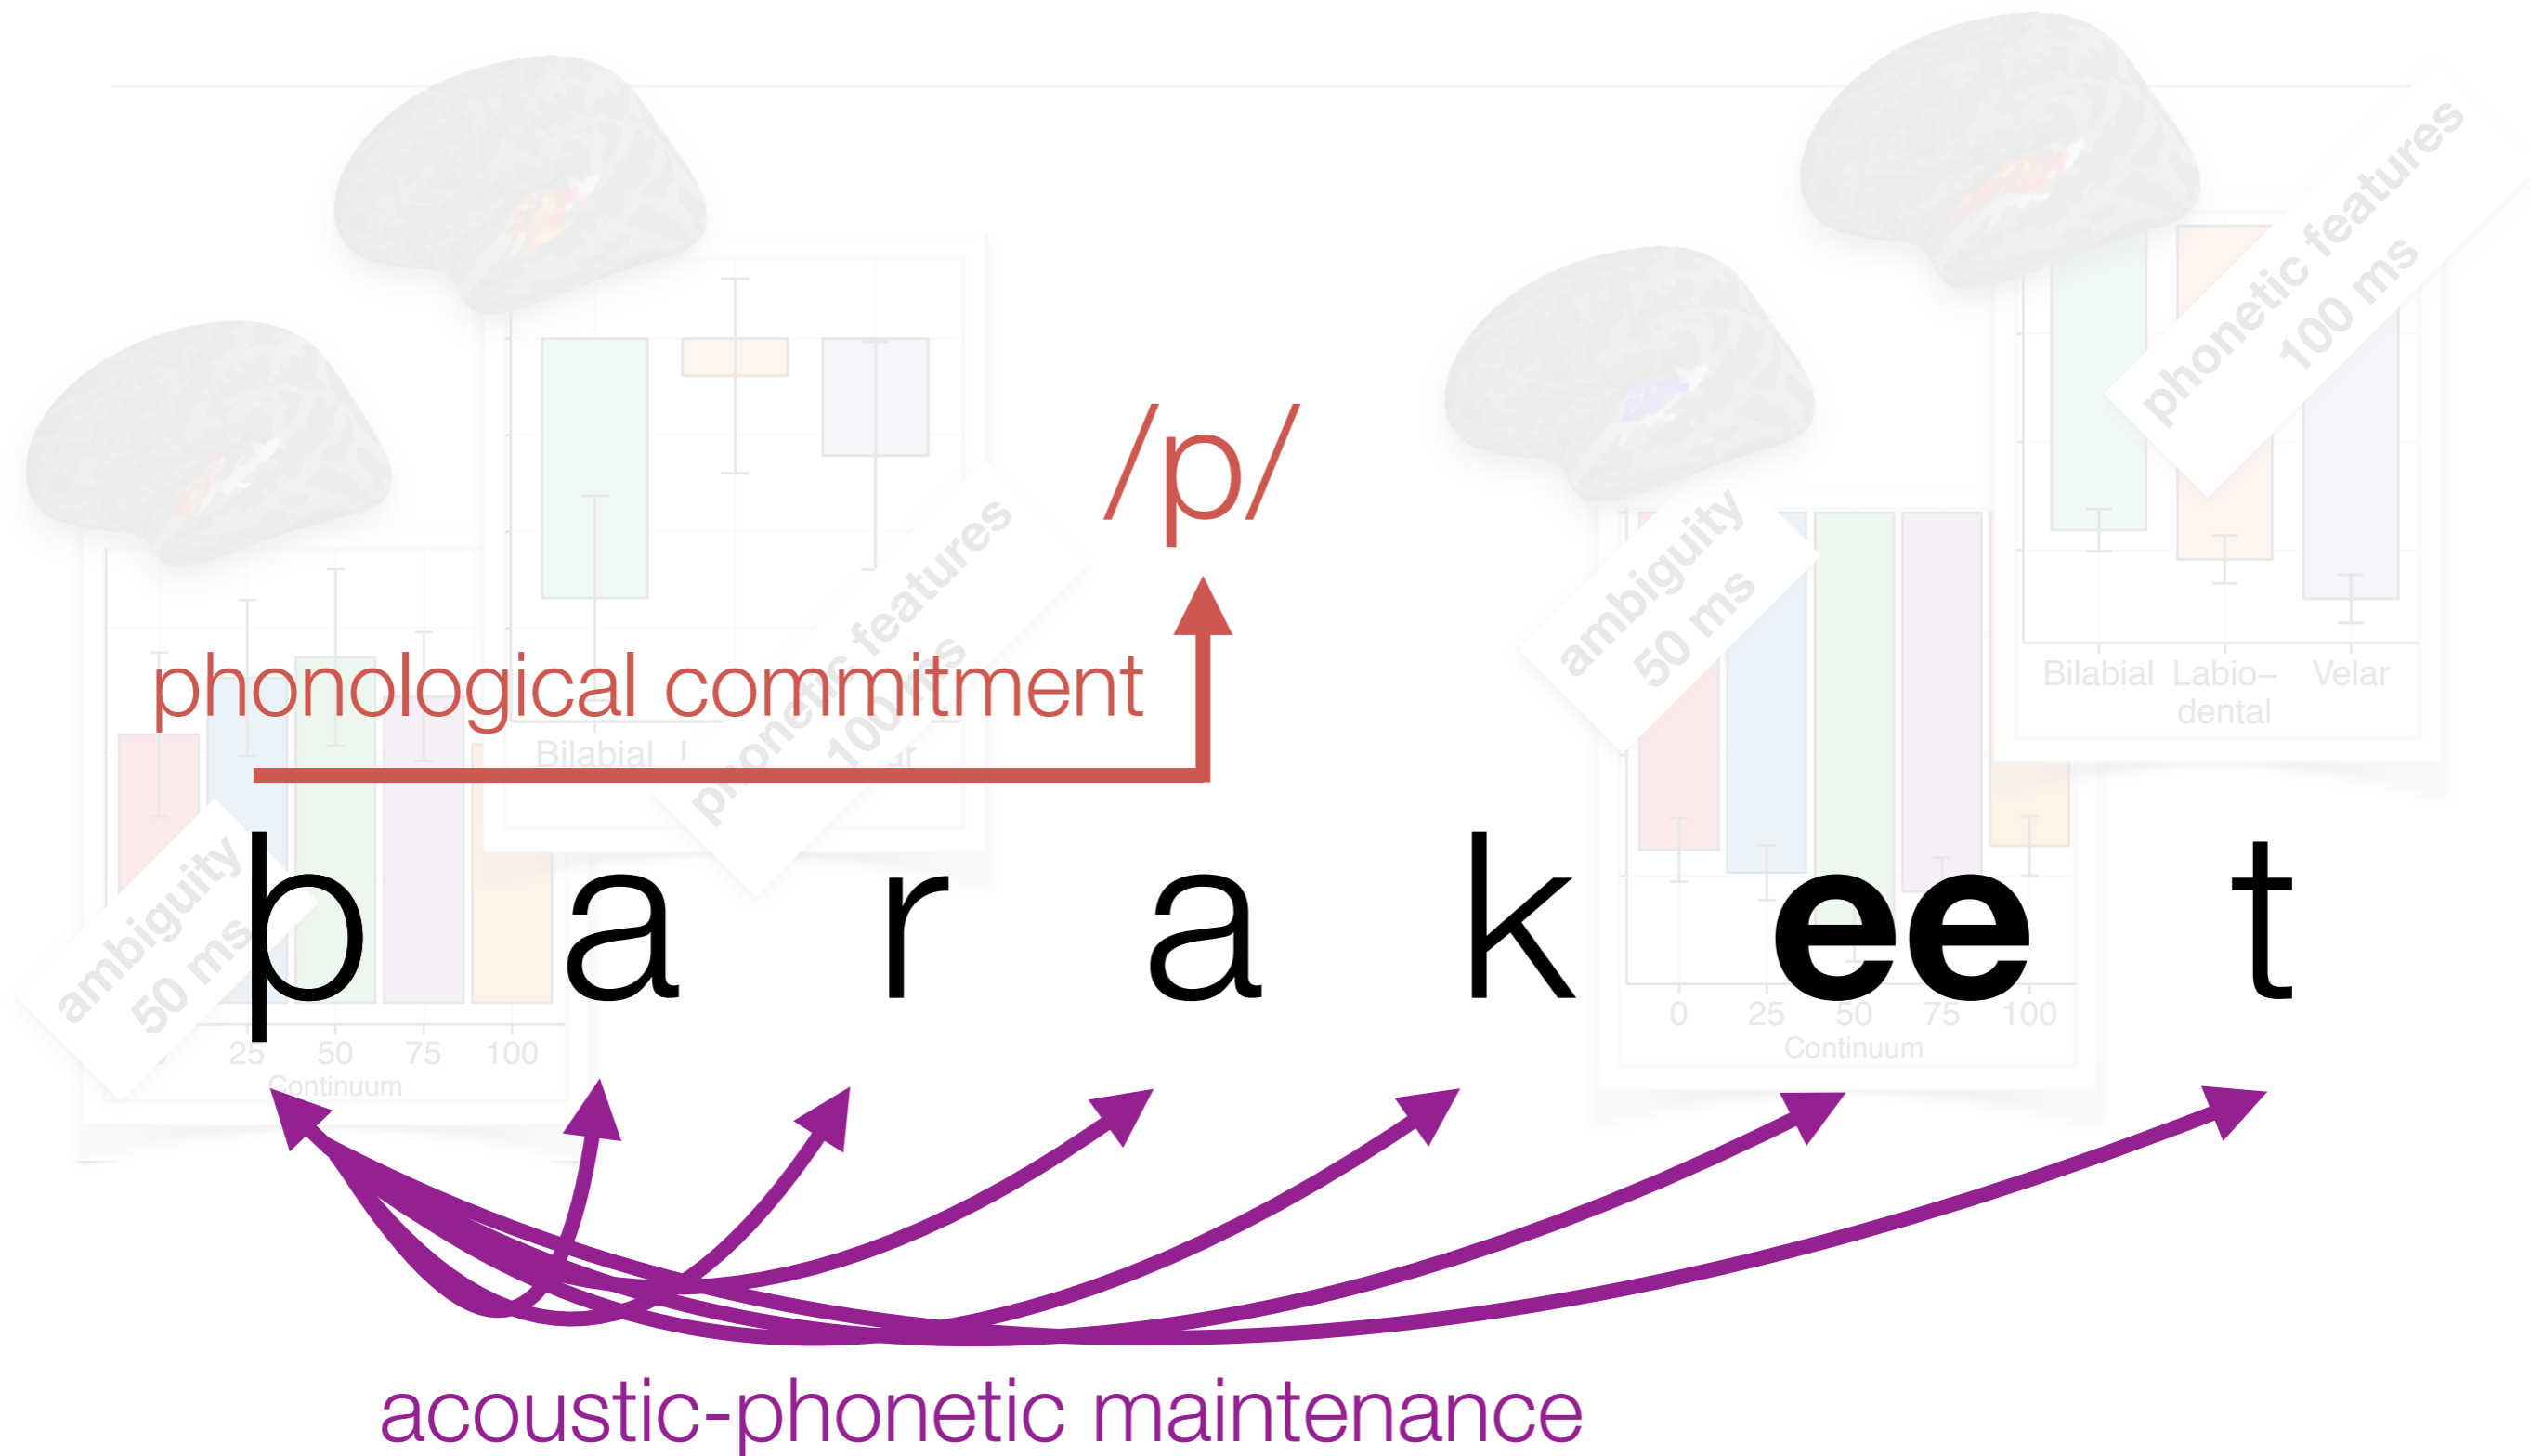

Reactivation in Intermediate Positions

- Information is re-evoked in auditory cortex
- Specifically time-locked to the onset of subsequent phonemes
- Not specific to the ambiguous tokens — general to language processing

Critical Variables

- **Surprisal:**

Probability of an outcome

$$-\log_2 \frac{f(\varphi_1, \dots, \varphi_t)}{f(\varphi_1, \dots, \varphi_{t-1})}$$

- **Entropy:**

Uncertainty over future input

$$-\sum_{w \in C} P(w|C) \log_2 P(w|C)$$

Critical Variables

- **Surprisal:**

No commitment
Commitment

$$-\log_2 \left(P(\varphi_a|A) \frac{f(\varphi_a, \varphi_2, \dots, \varphi_t)}{f(\varphi_a, \varphi_2, \dots, \varphi_{t-1})} Q_a^t + P(\varphi_b|A) \frac{f(\varphi_b, \varphi_2, \dots, \varphi_t)}{f(\varphi_b, \varphi_2, \dots, \varphi_{t-1})} Q_b^t \right)$$

- **Entropy:**

No commitment
Commitment

$$P(w|C, A) = P(w|C_a) P(\varphi_a|A) + P(w|C_b) P(\varphi_b|A)$$

Model Setup

- **Critical variables:**

no commitment entropy
no commitment surprisal
commitment entropy
commitment surprisal

- **Control variables:**

phoneme latency (ms)
phoneme latency (number of phonemes)
trial number
block number
stimulus amplitude
phoneme pair
ambiguity

Results

Putting together the processing pieces

Further test of commitment

Interpretation

Processing hierarchy: Scott and Johnsrude, 2003; Hickock and Poeppel, 2004; Liebenthal et al., 2005; Rauschecker and Scott, 2009

lexical access

phonological commitment

/p/

b a r a k e e t

acoustic-phonetic maintenance

Interpretation

Processing is not purely feedforward, or feed “up”: TRACE model: McClelland and Elman, 1986; McMurray et al. 2009. cf. MERGE: Norris et al. 2000

lexical access

phonological commitment

/p/

ambiguity
50 ms

b a r a k e e

acoustic-phonetic maintenance

making commitment to a category does not cost — the system can flexibly avoid committing to a category; avoiding the function of exposure

but what happens if you are continuously jumping on a trampoline because you made a wrong choice? well, you fall when talking to someone with a different accent.

phonemes
↓

What's next?

- **Commitment process**

- **Question:** is the time-course of commitment temporally or informationally defined?
- **Data collection phase:** Sandy Abu Adas; Alicia Chatten; Guy Tabachnick; Alec Marantz

- **Phoneme sequence representations**

- **Question:** are there phoneme sequence representations in STG? Re-activation?
- **Data collection phase:** Narayan Sankaran; Matthew Leonard; Edward Chang

- **Accent attunement**

- **Question:** does lexical feedback serve to perceptually re-map acoustics to phonetics?
- **Analysis phase:** Esti Blanco-Elorrieta; Liina Pylkkanen; Alec Marantz

- **Hierarchy in continuous speech**

- **Question:** does a similar architecture support higher-level comprehension?
- **Analysis phase:** Jean-Remi King; David Poeppel

- **Domain general auditory perception: pitch**

- **Question:** how is a percept of pitch formed from an ambiguous input?
- **Analysis phase:** Ellie Abrams; Alec Marantz

Accent attunement

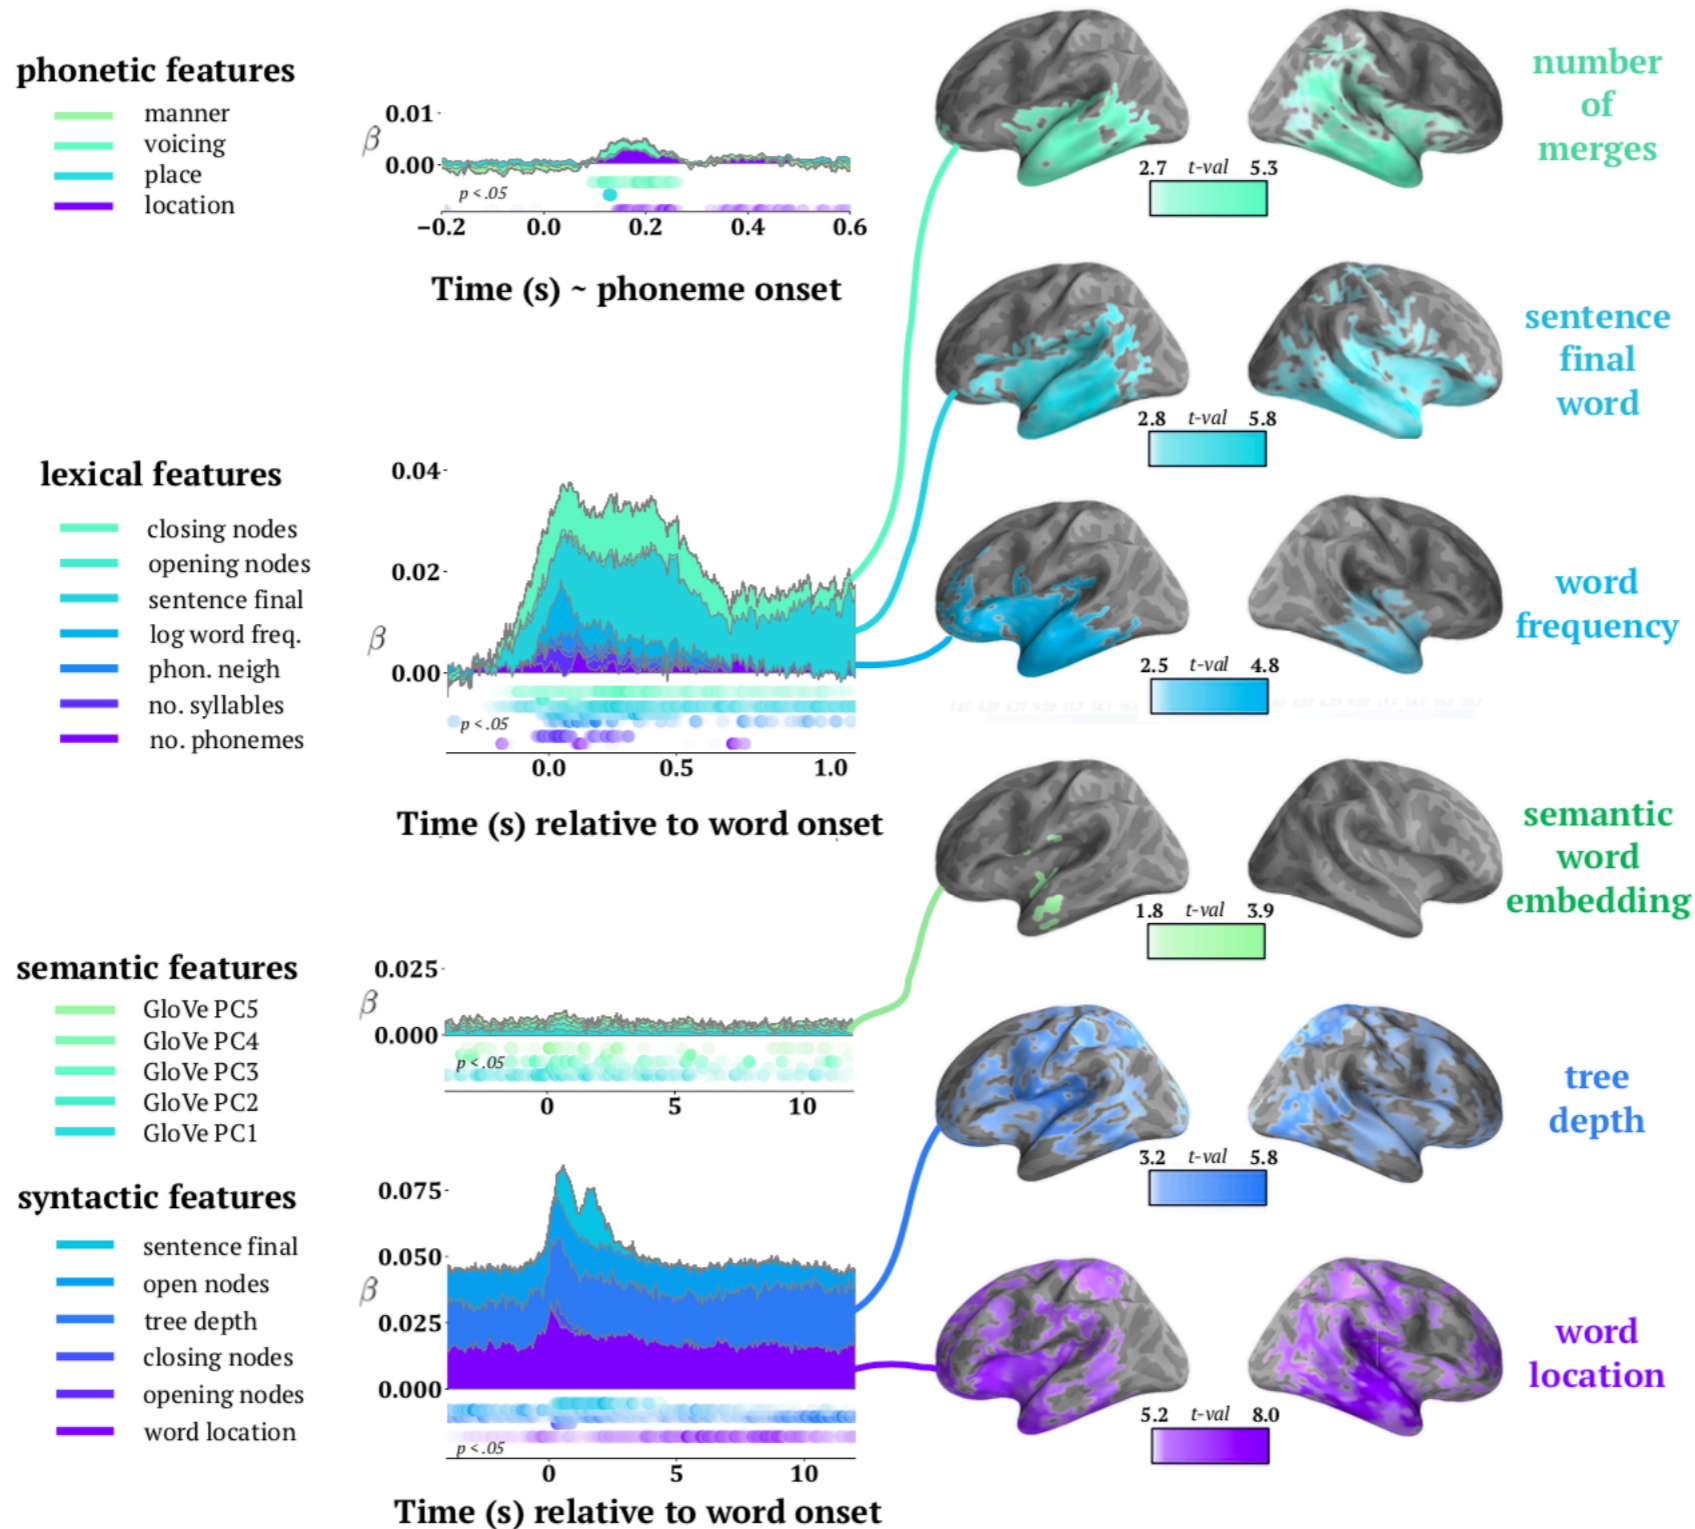

Interaction between accent and exposure in orbito-frontal cortex

Main effect of accent in left auditory cortex

Hierarchy in continuous speech

Cut-through connection

Ambiguity

Linear Evidence

Categorical Percept

Interpretation

- Attunement is proposed to involve **re-tuning perceptual boundaries** between phonological categories (Norris et al., 2003; Kraljic and Samuel, 2005, 2006, 2007; Maye et al., 2008; see Samuel & Kraljic, 2009 for a review)
